Hi Timoci.

Sorry, I did not get any information today.  
We are all waiting for latest updates from Pago.

Hi Michael /Steve.

The latest I know was that the autopsy was to be arranged this week, where are we now with that.

Kind Regards,  
Ambrose

Hello all

We (myself, USCG, DPS) have not yet received any medical history/records.

I met today with the hospital & was able to get some general charges for Usaia. The complete bill will only be released via power of attorney.

Morgue- \$70 first week, \$20 per day thereafter

Embalming- \$300

Emergency Room fees- \$120

Repatriation fees- \$128

EMS charge- TBD

Autopsy- TBD

I met with DPS, who are pursuing an autopsy. This is going to take days. They will update me with any developments. The detective I spoke with, Ani, said that the request was submitted yesterday to the Attorney General. He will update me with any developments. He added, "If we could have gotten the medical records and history, there may not be a need for an autopsy."

Thanks

Michael Marsik

Hello all

Today the WESTERN PACIFIC was met at the dock by AS Observer Program, NOAA Office of Law Enforcement, the vessel agent, US Coast Guard, Port Administration, Department of Health, Emergency Medical Services (EMS), & Department of Public Safety (DPS).

A local Catholic priest was called to say words for Usaia, blessing him (and the crew who very sadly watched over him as he transitioned). EMS took him to the LBJ Tropical Medical Center (LBJTMC).

It being a weekend, it was a little difficult to find LBJTMC people to answer questions. I was able to speak with someone in pathology. I was told that DPS is now in charge, and once they release Usaia, logistics can really begin.

To complete the DPS report, I was asked for:

- A copy of Usaia's latest medical records
- A copy of FFA observer's general duties & training
- A copy of the placement record (I have already given them this)

Upon completion of the release, pathology begins embalming, the Department of Public Health (DPH) goes forward with the Death Certificate and then the permits necessary for his travel home. Once permits for travel are obtained, the airline(s) can be contacted for scheduling. In order for him to travel, I was told he needs to rest in a sealed casket.

If we can be forwarded the two underlined action items above, we will be on our way to finally sending him home.

Thank you everyone for your help and support. Let's get him back home to his loved ones ASAP.

# Observer Safety Program Review Leadership Briefing

External assessments of the practices and  
policies that govern NMFS observer safety

**Richard Kupfer**, Fishery Biologist  
June 14, 2016

Discussions on changing safety training practices initiated discussions on a training review. Each successive event expanded need and scope.

## Identifying Our Need

### Observer Losses (1990 – Present)

	US Vessels	Foreign Vessels	Other Deployment <sup>3</sup>
US Observer	4		2
Foreign Observer <sup>2</sup>	1	N/A	N/A
US other <sup>1</sup>		1	

1. US trained (NMFS supported trainings) citizens employed by private contractors to service an international treaty the US is a signatory to.
2. Observers managed by non-US observer programs to serve aboard US vessel, and are often supported by NMFS staff.
3. Deployment includes, shoreside duties, and training that pose uniform risks to observers.

**SET THE STAGE :** Lack of information leads to need.

Deployments include shoreside duties and NMFS related activities. Foreign vessels and observers are listed under treaties (WCPFC, IATTC, etc.) that the US is a signatory to and that NMFS supports through placement or trainings. Initial inquiries show that data on fatalities and injuries is not maintained by some treaty organizations, and injury data is not maintained by some NMFS observer programs. NOAA has no data older than 2010, and no Observer specific data prior to 2015.

**“Complacency is the enemy of Safety.”**

**-Capt. Jennifer Lincoln**  
Ph.D., CSP - NIOSH

**“My immediate focus is to ensure existing policies and procedures are being properly executed.”**

**-Paul Doremus, Ph.D., Deputy Assistant Administrator for Operations, NMFS**

 **NOAA FISHERIES**

U.S. Department of Commerce | National Oceanic and Atmospheric Administration | National Marine Fisheries Service | Page 4

1. Highlights the continuing need to monitor changing conditions...“can’t mitigate risks we aren’t aware of”
2. Evaluate guidance and adherence

## Statement of work

- National Observer Program Advisory Team and its Safety Advisory Committee endorsed expansion to include “Safety Program” review instead of only safety training
  - Items for review under a Safety Program are key to developing a statement of work

[DAA Memo](#)

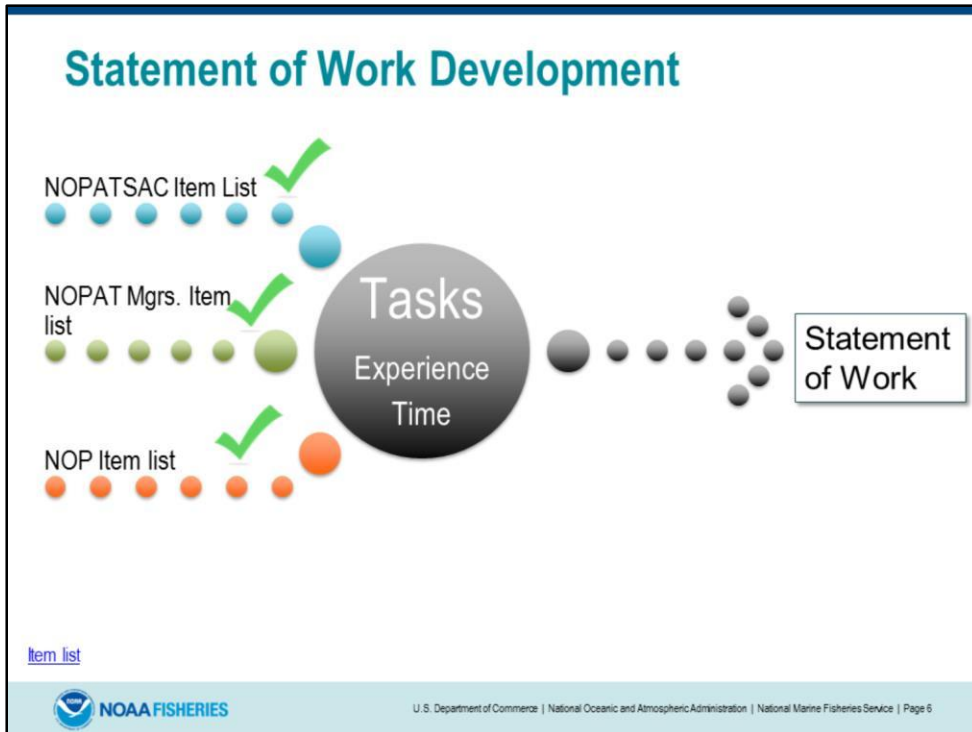

U.S. Department of Commerce | National Oceanic and Atmospheric Administration | National Marine Fisheries Service | Page 5

Introduce: **PARADIGM SHIFT** of “Safety Program” concept

After recent safety incidents the original proposal to review observer safety training programs was expanded to review all program safety items that impact observer safety. Generating specific tasks for the statement of work will depend upon the list of items that each regional program needs/wants reviewed.

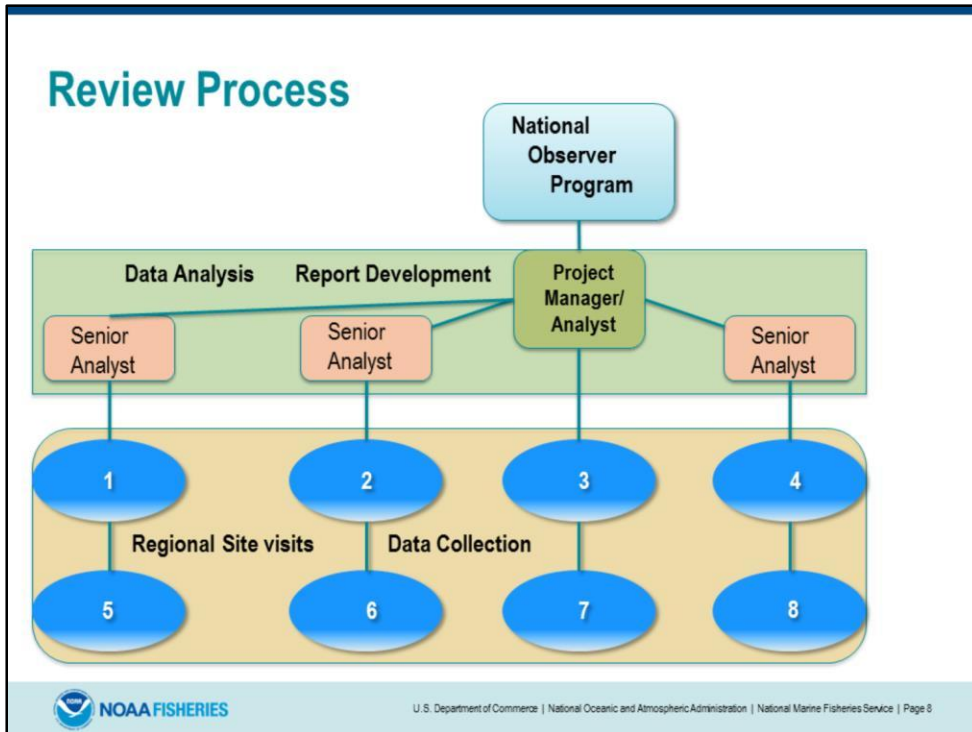

Once all item list feedback was completed, the tasks were expanded to make the SOW as detailed as possible. Tasks influenced deliverables, KSAs, and pay rate. NOPATSAC has already finalized feedback on item list. NOP managers finalized feedback on 5/25/16. Feedback from regional programs also determined time frames for review of each region.

Current progress puts the SOW at completion in June. With the IGCE and 2 COR signed forms ready to accompany the SOW, it could all go out to RFP in June and be awarded in mid-late Sep (Patty Zeilinski).

A team of 4 analysts, including a project leader, will review 8 programs over 6 months. 3 mos/program per person. Reviews will be concurrent based on coordination with regional programs. Project leader will present to NMFS and coordinate twixt team and NMFS.

## Review Items Core Element

### Safety Reporting

Mechanisms for reporting and tracking:  
Between observer, provider, program, acting officials, NMFS, NOAA.  
After Action Reports

### Communications

Efficacy and thoroughness of program and provider plans.  
Evaluation and updating mechanisms.  
Evacuation from sea.

### Practices/ Policies

Placement Exams.  
Vessel Drills.  
Observer safety requirements at sea.  
Health requirements for observers.  
Policy enforcement.  
Identification and mitigation of concerns.  
Oversight.

### Training

Review curricula for initial and refresher classes.  
Risk management.  
Trainer qualifications.  
Training standards compliance.  
Records and reporting.  
Logistics/coordination  
Observer certifications.

### Equipment

Industry standards.  
Maintenance.  
Suitability.

### International

International regs impact to NMFS program safety .  
NMFS role in fostering international safety.

### Regulations

Regional regs that impact safety.  
National regs:  
MSA,USCG, insurance.

## Costs

- Estimates are based on the highest OPM rates, current contractor rates, and current travel inquiries.

Labor costs	\$329,000
Travel costs	\$56,000
<b>Total Estimated Costs</b>	<b>\$385,000</b>

[Cost sheet](#)

U.S. Department of Commerce | National Oceanic and Atmospheric Administration | National Marine Fisheries Service | Page 10

All estimates were made using the highest dollar amounts and longest periods of times necessary to complete tasks. Only the lodging does not include taxes in the estimates. Review is frontloaded with length depending upon regional schedules. (this would depend on the schedules of each regional training)

Talofa Liz,

Michael and myself were both dockside when the vessel returned to port with the deceased observer Usaia Masibalavu. Local Police, NOAA OLE and USCG were all present to investigate the incident. They would be the ones to contact about the details. There was an autopsy done at LBJ Hospital by Dr. Amor Gonzales 684-633-1222 X 628. We handled the organization and shipment of Usaia's body back to Fiji with help of the owner of the vessel he passed away on. A small service was held for Mr. Masibalavu with the Fijian community here which I attended and spoke at. I hope this is helpful.

good day, soifua,

Steve

On 10/20/2016 4:58 AM, Liz Mitchell wrote:

Hi Stephen and Michael,

I'm from the Association for Professional Observers. I've known Joe and John for many years, so wanted to introduce myself to you both. APO advocates for observer safety, among other things.

I have received news of the death of a Fijian observer, Usaia Masibalavu, who died

while working as an observer on the US purse seine vessel. I received the death certificate which indicates bleeding of the lungs as the cause of death. However, various Fijian and NOAA officials are reporting that he died of a heart attack. I have talked with three different US physicians who all agree that this death certificate does not imply a heart attack as the cause of death. It says that the cause of death was bleeding of the lungs (diffuse alveolar hemorrhage and pulmonary edema). One physician stated that a heart attack would not cause this condition. Can any of you possibly explain this discrepancy in the cause of death?

Also, I heard that he was found at the bottom of some stairs three days after his death. This is suspicious to me. I would think if an observer didn't show up at their station, an onboard investigation would ensue immediately I was wondering if it is possible for me to see the autopsy report. Were any forensic toxicology studies done?

Yet another version of his death emerges: Usaia reported in his standard data report on Wednesday, May 18, that he sustained a knee injury. On Friday, May 20, the captain called in (to who?) to report that Usaia had complained that day of dizziness and blurry vision and that they were going in. But then the next day he died before they reached the dock.

I have several questions:

1. What sort of autopsy was performed?
2. Did they do the necessary toxicology screenings?
3. Did the captain administer medication to Usaia for his knee or other injury?
4. Did the autopsy indicate a knee injury and confirm time of injury?
5. Was there a heart attack?
6. Is there an investigation into the cause of death?
7. What information has been provided to his wife?

Thanks very much for any information you can provide.

Good Afternoon (b) (6) USCG

To clarify- the deceased is not a NOAA observer.

Usaia Masibalavu was a Fijian National Observer currently under contract with Pacific Islands Forum Fisheries Agency (FFA).

The details of the South Pacific Tuna Treaty (SPTT) state certain responsibilities that are undertaken in Pago Pago fall under the duties of the National Marine Fisheries Service, but to be sure, these FFA fisheries observers are not "NOAA observers".

Thanks for your help

## VERIFICATION OF EMBALMER

### To Whom It May Concern

I, Fagaalu Siaki, an Embalmer for LBJ Tropical Medical Center, have Sanitized and embalmed the remains of a person encased herein, identified  
As; Usaia Masibalavu

Arterial embalming has been completed. Both thoracic and abdominal cavities have been aspirated and treated with fluid. I further state that there are no foreign objects such as firearms, explosions and ammunitions within this container. I also state that there are no drugs related paraphenalia being moved with this Body.

Note : This body has been placed in a hermitically sealed casket. The casket has been encased in as air-tray as required by airline regulations

Good Morning Elizabeth

Fair enough

You have been pointed in the right direction by Steve.

I do not wish to discuss the factors surrounding Mr Masibalavu's passing with you.

If you need anything, please contact my direct supervisor, Mr John Kelly.

Thank you & have a nice day

Michael Marsik

Good morning Michael and all,

I am sorry to say this but I try hard to not reveal my sources because information is sometimes really difficult to come by. But that being said, how would knowing that information help? Heart attack has been the only story I heard from officials. What I understand is that Fijian officials are not being cooperative with US officials in releasing the necessary documentation, so it could be that the people I spoke with at NOAA are accepting the version from Fijian officials. I think what will reveal more about the situation is seeing the autopsy, any toxicology reports conducted, phone logs from the captain regarding Usaia, data reports from Usaia, especially if he reported a knee injury, as well as a demand for knowing the medication, if any, that was administered by vessel personnel to Usaia (for pain? for the knee injury?). A toxicology study would also reveal what sort of medication he was taking. As I understand, being a US-flagged vessel, the US has jurisdiction over this case, not Fiji, despite the observer being Fijian. I'm trying to get to the bottom of this, like you. I'm sorry - I don't mean to be unhelpful or combative. Do any of you have access to those report and may I see them?

Thanks,

Liz Mitchell

Good Morning Elizabeth

On the heart attack question:

Could you please let us know which various NOAA officials were aware of a heart attack with Mr Masibalavu? That would help us as well. We would like to pool together all of the persons with knowledge of this, to provide a clearer understanding of the incident.

Thank you

Michael Marsik

On Thu, Oct 20, 2016 at 4:58 AM, Liz Mitchell <[emitch@efn.org](mailto:emitch@efn.org)> wrote:

Hi Stephen and Michael,

I'm from the Association for Professional Observers. I've known Joe and John for many years, so wanted to introduce myself to you both. APO advocates for observer safety, among other things.

I have received news of the death of a Fijian observer, Usaia Masibalavu, who died while working as an observer on the US purse seine vessel. I received the death certificate which indicates bleeding of the lungs as the cause of death. However, various Fijian and NOAA officials are reporting that he died of a heart attack. I have talked with three different US physicians who all agree that this death certificate does not imply a heart attack as the cause of death. It says that the cause of death was bleeding of the lungs (diffuse alveolar hemorrhage and pulmonary edema). One physician stated that a heart attack would not cause this condition. Can any of you possibly explain this discrepancy in the cause of death?

Also, I heard that he was found at the bottom of some stairs three days after his death. This is suspicious to me. I would think if an observer didn't show up at their station, an onboard investigation would ensue immediately I was wondering if it is possible for me to see the autopsy report. Were any forensic toxicology studies done?

Yet another version of his death emerges: Usaia reported in his standard data report on Wednesday, May 18, that he sustained a knee injury. On Friday, May 20, the captain called in (to who?) to report that Usaia had complained that day of dizziness and blurry vision and that they were going in. But then the next day he died before they reached the dock.

I have several questions:

1. What sort of autopsy was performed?
2. Did they do the necessary toxicology screenings?
3. Did the captain administer medication to Usaia for his knee or other injury?
4. Did the autopsy indicate a knee injury and confirm time of injury?

5. Was there a heart attack?
6. Is there an investigation into the cause of death?
7. What information has been provided to his wife?

Thanks very much for any information you can provide.

## After Action Report- Usaia Masibalavu

### 1. Length of Employment/ Experience / Past Problems

Fiji Ministry of Fisheries (Marine Observer) 2010-2016

Senior Observer – I had worked with Usaia in Pago Pago as far back as 2010

No known problems in AS

Was Usaia deployed on the Western Pacific before? If so, could you add the dates and a copy of the placement meeting if there was one conducted?

If you have access to the trip report, that might be helpful

### 2. Observer Placement date – vessel name

09April2016 Placement on Western Pacific

Vessel departed 4/23/2016

Do you know what or where Usaia was during the time the placement meeting was conducted on 4/9/16 and the departure date of 4/23/16? I would also add the departure port in the document. Is there a requirement for the observer to stay in touch with you all while he is waiting on the vessel to depart? Was there a reason that it took 14 days between the time of placement and the time the vessel left?

### Communication – dates / time, with whom, what was discussed

**May19,2016 11:04 am:** Observer Weekly Report was forwarded to us (b) (6) – Debriefed (Cook Islands Fisheries Field Office) in American Samoa - Usaia Masibalavu, Fi (b)(3)MSA, Western Pacific, 1/2 full, vms is o (b)(3)MSA. Observer had a twisted knee injury, have ice on knee to reduce swelling, No problems, End

**May19,2016 before 12:56 am** (b) (6) from the Western Pacific called and said Usaia had hurt his knee and the vessel is coming in to port so he can go to the hospital. He also informed me that they were seeking a USCG medical waiver on the required 96 hour entry notice because they were much closer to American Samoa than that and they were seeking medical care for Usaia Masibalavu.

**May19,2016 in the afternoon** (b) (6) from the Western Pacific called with an update saying that Usaia was complaining of problems with his vision. We planned to meet the vessel at the docks to take Usaia to the hospital.

**May20,2016 around 13:0** (b) (6) from the Western Pacific called and informed Steve Kostelnik that Usaia Masibalavu had passed away en route to Pago Pago, American Samoa to seek medical attention. Steve Kostelnik immediately informed Michael Marsik.

**May20,2016 13:04:** Michael Marsik sent out an e mail to FFA – Ambrose Orianiha’a & Fredrick Ani’l NOAA PIRO - John Kelly informing them of Usaia Masibalavu’s death. A phone call was made to NOAA PIRO Observer Program Manager- John Kelly

We continued communication with the WESTERN PACIFIC agen (b) (6), who was in (flight/airport) transit to Pago Pago from San Diego, California and in regular communication with the vessel. We never communicated with the Captain until the vessel arrived.

No Emergency Action Plan was in place. FFA has since created an EAP which we will review and modify FFA Observers working out of Pago Pago.

American Samoa Attorney General’s office was contacted to see if there were any legal considerations. The AG said he knew of none. USCG stopped in the office to inform ASOP that they will be investigating the matter.

Deleted: any

American Samoa Observer Program called the hospital (LBJ) to see about transporting Usaia. They said that Emergency Medical Services (EMS) ambulance could not be deployed to do so until the Department of Public Safety (DPS) dispatched them to the scene, but said that they would be prepared & standing by.

Called DPS and alerted them of the situation. They are to meet us dockside and dispatch EMS ambulance.

Michael Marsik spoke with the agent upon his arrival on the flight that night to assure him we would be present.

**May21,2016 07:00** Vessel Arrived in Pago Pago

WESTERN PACIFIC was met at the dock by AS Observer Program, NOAA Office of Law Enforcement, the vessel agent, US Coast Guard, Port Administration, Department of Health, Emergency Medical Services (EMS), & Department of Public Safety (DPS).

Enforcement officers were the first to board the vessel.

A local Catholic priest was called to say words for Usaia, blessing him (and the crew who very sadly watched over him as he transitioned). EMS took him to the LBJ Tropical Medical Center (LBJTMC).

Michael Marsik went to LBJTMC to get information about transporting Usaia Masibalavu’s body back home to Fiji and sent out the following:

Deleted: LBJ Hospital

Deleted: m

It being a weekend, it was a little difficult to find LBJTMC people to answer questions. I was able to speak with someone in pathology. I was told that DPS is now in charge, and once they release Usaia, logistics can really begin.

To complete the DPS report, I was asked for:

- A copy of Usaia's latest medical records
- A copy of FFA observer's general duties & training

- A copy of the placement record (I have already given them this)

Upon completion of the release, pathology begins embalming, the Department of Public Health (DPH) goes forward with the Death Certificate and then the permits necessary for his travel home. Once permits for travel are obtained, the airline(s) can be contacted for scheduling. In order for him to travel, I was told he needs to rest in a sealed casket.

If we can be forwarded the two underlined action items above, we will be on our way to finally sending him home.

Thank you everyone for your help and support. Let's get him back home to his loved ones ASAP.

**May21,2016 13:03** - USCG sent out the following e mail

Good Afternoon SCC Honolulu,

U.S. Coast Guard Marine Safety Detachment personnel, CWO Bryan Anderson and GS-12 Frank Thomsen, conducted a marine casualty investigation for the deceased NOAA observer on the commercial fishing vessel WESTERN PACIFIC today alongside NOAA law enforcement officer Edwin Seui and American Samoa police investigators. The preliminary investigation revealed that the death may have been caused by a pre-existing medical condition but we will wait for the final results from the American Samoa coroner's autopsy report before making a final determination. The American Samoa medical examiner and investigators conducted an on-site review of the deceased individual and did not observe any indications of foul play. The investigation is ongoing and we will update you with more information as we receive it.

I would add information on when the body was shipped back to Fiji on which dates , how it was done, and who paid for this. All of this information is important to understanding the great work that you all did as well as the vessel in a tragic situation.

Subject: RE: Tag seeding Fiji ROP / biological sampling  
Date: Thu, 27 Jan 2011 08:42:14 +1300

Dear Caroline,

Thank you for the positive reply.

Ill as (b) (6) as to why he only did one double tag and not 5, and get back to you.

(b) (6) is going to be placed in General Santos, so if you need him to start tagging, i could contact the observer coordinator in the Philippine (b) (6)

(b) (6) might be able to suppl (b) (6) with the tagging kits.

However, as it stands, ill await your supply of tagging kits and issue it to the observers who are more competent.

I will aim to have all 10 Fiji ROP Observers part take in the tagging program as soon as possible, provided, they show a high level of competence.

As for biological sampling, with respect to the Fiji ROP Observers, i could also issue the necessary kits to the competent observers and have them carry it out in Pagopago.

Ultimately, i will have to rely on Gordon and your analysis of the observer tagging data and proficiency, apart from mine, in judging observer competence.

As you have recommended, ill definitely make sure tha (b) (6) part takes in the tagging program, as per your recommendation.

Thank you again for the favourable reply and i look forward to working with you on both the tagging and biological samplings.

Sincerely,

Netani Tavaga.

Subject: Tag seeding Fiji ROP / biological sampling

Date: Wed, 26 Jan 2011 14:33:33 +1100

From: CarolineS@spc.int

To: (b) (6) ambrose.orianihaa@ffa.int (b) (6)

CC: (b) (6)

Dear Netani

Thank you very much for your enquiry

Observers can deploy tag seeding kits if they already do a good observer work

Tag seeding is not an easy task to do and we need entire collaboration from the observers. Thus observers need to show dedication to their work first.

After debriefing observer you consider that the observer has enough experience and he is ready to deploy tag seeding you can provide him a kit.

I don't think you have tag seeding kit available in Fiji Office I can send few kits that you can distribute to ROP obs.

Observers that are placed in Pago can deal with Gordon directly, other observers when they ready you can provide them with a kit if they get onboard purse seiners

Fo (b) (6) if they are placed on purse seiners you can provide them a kit

I checked (b) (6) tag seeding log shee b(3)MSA Fo (b) (6), could you ask hi b(3)MSA Maybe he had some issue he should put information in the comment section.

In attached you can find a manual for tag seeding, it give advises to the observer on how to do tag seeding. I will provide very soon a manual for observer debriefers and coordinators.

Shortly ( I wait for replacement of stock) I will send you 10 seeding kits and manual so you can distribute them to the observers before their placement. Also when you provide the kit to the observer only give 1 kit to the observer and keep the rest in the office. Everytime you provide a kit you need to inform me by giving me details : kit number / obs name/ boarding date/ Obs trip id/ vessel name.

Regarding paiement for Observe (b) (6) stomach samples and for the tag seeding fro (b) (6) I am in discussion with our administration to set something with SPC Suva so paiement can be done easier. I will let you informed as soon I have update.

Also I have ask Timoci if it would be possible to check up wit (b) (6) to have an update to know if they still do sampling as I didn't get any feedback from them yet. If you could get in contact with them it would be fantastic. I will send them an email copied to you.

Thank you again Netani for your enquire and concern in supporting our tagging project if you are also able to help with biological sampling it would be fantastic  
Regards,

Good Morning Elizabeth

Fair enough

You have been pointed in the right direction by Steve.

I do not wish to discuss the factors surrounding Mr Masibalavu's passing with you.

If you need anything, please contact my direct supervisor, Mr John Kelly.

Thank you & have a nice day

Michael Marsik

Good morning Michael and all,

I am sorry to say this but I try hard to not reveal my sources because information is sometimes really difficult to come by. But that being said, how would knowing that information help? Heart attack has been the only story I heard from officials. What I understand is that Fijian officials are not being cooperative with US officials in releasing the necessary documentation, so it could be that the people I spoke with at NOAA are accepting the version from Fijian officials. I think what will reveal more about the situation is seeing the autopsy, any toxicology reports conducted, phone logs from the captain regarding Usaia, data reports from Usaia, especially if he reported a knee injury, as well as a demand for knowing the medication, if any, that was administered by vessel personnel to Usaia (for pain? for the knee injury?). A toxicology study would also reveal what sort of medication he was taking. As I understand, being a US-flagged vessel, the US has jurisdiction over this case, not Fiji, despite the observer being Fijian. I'm trying to get to the bottom of this, like you. I'm sorry - I don't mean to be unhelpful or combative. Do any of you have access to those report and may I see them?

Thanks,

Liz Mitchell

Good Morning Elizabeth

On the heart attack question:

Could you please let us know which various NOAA officials were aware of a heart attack with Mr Masibalavu? That would help us as well. We would like to pool together all of the persons with knowledge of this, to provide a clearer understanding of the incident.

Thank you

Hi Stephen and Michael,

I'm from the Association for Professional Observers. I've known Joe and John for many years, so wanted to introduce myself to you both. APO advocates for observer safety, among other things.

I have received news of the death of a Fijian observer, Usaia Masibalavu, who died while working as an observer on the US purse seine vessel. I received the death certificate which indicates bleeding of the lungs as the cause of death. However, various Fijian and NOAA officials are reporting that he died of a heart attack. I have talked with three different US physicians who all agree that this death certificate does not imply a heart attack as the cause of death. It says that the cause of death was bleeding of the lungs (diffuse alveolar hemorrhage and pulmonary edema). One physician stated that a heart attack would not cause this condition. Can any of you possibly explain this discrepancy in the cause of death?

Also, I heard that he was found at the bottom of some stairs three days after his death. This is suspicious to me. I would think if an observer didn't show up at their station, an onboard investigation would ensue immediately I was wondering if it is possible for me to see the autopsy report. Were any forensic toxicology studies done?

Yet another version of his death emerges: Usaia reported in his standard data report on Wednesday, May 18, that he sustained a knee injury. On Friday, May 20, the captain called in (to who?) to report that Usaia had complained that day of dizziness and blurry vision and that they were going in. But then the next day he died before they reached the dock.

I have several questions:

1. What sort of autopsy was performed?
  2. Did they do the necessary toxicology screenings?
  3. Did the captain administer medication to Usaia for his knee or other injury?
  4. Did the autopsy indicate a knee injury and confirm time of injury?
  5. Was there a heart attack?
  6. Is there an investigation into the cause of death?
-

7. What information has been provided to his wife?

Thanks very much for any information you can provide.

Hi Mike.

Thanks for this update.

Yes, it was a mistake on our part as he ( Usaia ) was initially assigned for a trip out from Kiritimati but things did not term out as expected.

Fine with your arrangement for now but will use him for only a trip and move him from Pago.

Regards,  
Ambrose

Fredrick & Ambrose

Please be advised that Usaia arrived yesterday.

When he was being delivered to the vessel, he noted that he was assigned to the same vessel which he was instrumental on establishing charges of shark finning, which he did observe in 2009. I then spent

over half a day trying to work the logistics of swapping him out. This is a situation where the observer must be switched.

I do not have access to the information regarding previous trips' (& observers) enforcement activity. This should be discussed on a National Program level, at least within the FFA. I find it strange that you will hesitate- double and triple thinking your decision- and most of the time will not put female observers on vessels when they are available to work, but will throw an observer to the wolves without considering that you are assigning him to a potentially hostile working environment.

In addition, I do not feel comfortable telling the other vessel we need to do a second placement so we can put a guy that reported another vessel on yours because it might not be safe for him over there. I made up a lie and told the captain that you (FFA) messed up the logistics. I don't think he bought it.

Usaia has been re-assigned to the WESTERN PACIFIC  
(b) (6) has been re-assigned to the KOORALE

1 CASKET: Human Remains  
DECEASED: USAIA MASIBALAVU

FREIGHT: US. \$ 175.00 RECEIPT NO: 103478

### CONDITIONS OF CARRIAGE

The shipper agrees to ship the goods in accordance with the laws of Western Samoa. The general statutory conditions of carriage are contained in the

SEA CARRIAGE OF GOODS ORDINANCE 1960  
 CARRIERS ACT 1975

In addition the following shall apply:

1. Delivery at the port of discharge will be granted only in exchange for this stamped document.
2. All duties and/or customs charges shall be the responsibility of the shipper.
3. The shipper shall declare all inflammable or dangerous cargoes, ( for example, petrol, ammunition, explosives acids poisons, ( etc ). A shipper shall be liable for all damage and loss caused by such cargo that has not been so declared
4. The carrier may at any time refuse the carriage of any particular cargo without giving reason
5. The carrier shall not be liable for any loss suffered by the shipper or consignee or any persons whatsoever whether or not due to negligence of the carrier and/or his servants or his agents in failing to carry the goods on any particular voyage.
6. If any non perishable cargo is not collected by the shipper within 24 hours of arrival, the carrier may either - (a) Place such cargo in bond at the Port of Discharge and such handlings, bond and other charges shall be at the loss of the shipper: or (b) return such cargo to the Port of Shipment at the freight loss to the shipper and store such cargo in such manner as the carrier deems fit at the handling and storage cost to the shipper.  
 If in either (a) or (b) above a notice has been dispatched by normal post to the last known address of the shipper and such cargo remains uncollected for a period of ten (10) days thereafter, if the cargo has any real value, the carrier may sell the cargo by tender negotiated sale or otherwise and apply the price to charges incurred in respect of their cargo or any other account incurred by or on behalf of the shipper.
7. If any perishable cargo or any cargo that does not have any real value is not collected within 24 hours of arrival at the Port of Discharge, the carrier shall treat the cargo as in paragraph 6 above. When the cargo perishes or loses all value that cargo may be destroyed at such time and in such manner as the carrier deems appropriate at the cost to the shipper.
8. The shipper shall DECLARE to the carrier the contents of any repack(s). The carrier reserves the right to refuse the carriage of any repacks(s) should the shipper fails to abide by the stipulation of this clause.
9. This bill of lading cannot be refunded after one month from the date of issue and all refunds are subject to 25% deduction.
10. This bill of lading is valid only for two months from the date of issue.

AT PAGO the 17th day of June 2016
