Subject: [Tropical-storms] Dorian radar loop from Bahamas
Attachments: ATT00001.txt

I just completed and posted this on Friday, but it justifiably got lost in the commotion from the "NOAA Alabama memo". While that is far from going away, you might be looking for a distraction.

There is a 66-hour radar loop from the Bahamas at <http://bmcnoldy.rsmas.miami.edu/tropics/radar/>. I need to thank Christopher Hollis at tropicalatlantic.com for mirroring the Bahamas radar data during the event.

Scientifically, it's a fascinating case with incredible radar coverage... of course, the reality of incredible land-based radar coverage is the devastation going on simultaneously on the ground.

Regards,
Brian
