Hi Lori,

Thanks for writing.

Regarding the graphic, each color has a range. The first one is 5 to 10%, then 10 to 20%, and so on.

Best regards,

Dennis

Hi Dennis,

I wanted to make sure we are reading the legend on hurricane and tropical storm advisories correctly. For the color key for "5-day chance of receiving sustained winds" [here](#), does the first dark green bar represent 5%, the next lighter green bar 10% and the following lighter green bar 20% chances of sustained winds, or do those bars represent a 5% to 10% chance, 10% to 20%, and 20% to 30%, respectively?

Thanks for your help,
Lori Robertson
