Subject: What is NOAA Thinking?

Dear Sir: It was with profound sadness that I read today the NOAA had walked back hurricane Dorian information regarding the occupant of the White House claiming it would strike Alabama. Letting this non scientist make a false claim regarding a potential national disaster and then supporting this falsehood smacks of dictatorship.

As a scientific organization, it is your responsibility to report accurate, up to date information for the American public. Failure to do so, will have terrible consequences during future disasters.
Sincerely, Deborah Clark, Ballston Spa, New York
