Subject: NOAA maps to deceive the public?

Dear Ms Roberts,

The President presented a hurricane forecast map from you that had an unusual shape representing the forecast area. In fact, I have never seen a forecast prediction like this, and it must mean that you have changed your procedure for calculating the forecast target zone. As I understood the statistical mathematics used to generate these "balloons", a figure like what the President displayed could NEVER be derived. Please provide me with a scientific reference that explains your method of calculating these forecast zones, and help me understand the unprecedented figure displayed by the President.

If the truth is that you had nothing to do with that edited figure, please admit this and clearly state your innocence. Publishing counterfeit weather maps is a federal crime. If you are unable to do this, how can we ever trust information from you in the future?

I look forward to receiving an explanation of this unusual hurricane forecast map from you and I will also be urging my congressional representative to investigate your involvement in this obvious deception of the American people. We are not paying your salary so you can lie to us.

Thanks for your consideration,
Todd Miller, PhD
Sherman Oaks, CA
