**Subject:** Re: RPAs and baseline

Thanks Sarah. That makes sense. If you haven't already please state in the effects section that there is uncertainty regarding whether the geomorphic flows will be implemented given that they have not been implemented for 10 years despite there being a regulatory requirement to do so. Or something to that affect that is accurate.

Talked to Garwin about 09 RPAs in the baseline.

-RPAs that were not completed or addressed are in the baseline and stated as such (*geomorphic flows; temperature model; long term flow prescription*)

-RPAs that were completed or carried out are in the baseline (*pulse flows, base flows and temperature managment*)

-If RPA actions are continued to be proposed, they are part of the PA (*all of the above actions except the temperature model and long-term flow prescription, which were dropped*). Geomorphic flows are different because of the magnitude proposed and option for mechanical mobilization.
