All --

Please see the documents provided by the SWFSC related to the "Shasta seasonal storage management and allocations logic" call yesterday. Some of you may have seen this through other channels, but I wanted to be sure to distribute. I'll also save on the server.

Cathy

Cathy,

Please see the attached documents from Miles Daniels relevant to the "Shasta seasonal storage management and allocations logic" call this morning.

Eric

Subject: ROC_AR_Releasable (CCR and Shasta/Keswick Temperature Relationships)

To: Eric Danner - NOAA Federal <eric.danner@noaa.gov>

Hi Eric,

Attached are two documents which describe some of the relationships between Shasta storage, Keswick releases, and temperature at CCR.

The file ending in 'ROC_DOC1', is an attempt to re-create the 'rule of thumb' figure on page A-45 of appendix A of the BA. Using the methods outlined in the attached document, I was unable to generate the same plot USBR produced. However, I was not able to find any documentation describing how USBR generated this plot so it may be a difference in methods.

The file ending in 'ROC_DOC2' is analysis looking at the statistical relationship between Keswick release temperature and volume and temperature at the CCR gauge.

Data required to generate plots in both documents are attached as well.

Please let me know if there are any questions,
Miles
