Katrina/Jeff,

Here is the Barker Slough monthly pumping data from 2008-present. BS pumps directly into NBA, so NBA carries the BS water from Delta for distribution and diversion.

Jeff, I don't know what the "maximum permitted" capacity is, I can look into if needed.

I chose 2008 because it was around the last time NMFS issued a BO for ops.

Also is probably at full "build out" by now, prior to 2008, not sure if true.

I didn't break this down by water year type or season. Let me know if you would like that done also.
