Subject: Re: 7DADM v. DAT

Yes.

I think in one of Brycen's RPA amendment memos there may be a similar conversion but I think it's just for CCR and I was hoping to not have to go digging if there was an easy work around?

Thank you,
Evan

Hold up, I think I have something on this that Dave did on CWF. I can dig it up later this morning. It was basically a conversion from one to another at specific locations. I'd that what you need?

Hey Eric,

Can you provide a "correction" to compare DAT against 7DADM criteria or thresholds?

I'm doing my best to assess temperature effects and Reclamation has used the 2003 EPA region 10 water quality criteria as thresholds for various effects. The problem is that they then use the 7DADM criteria to assess modeled average daily temperatures.

The simpler the correction the better (for me), but if it's helpful/more exact the time period I'm looking at is May 15 - October 31, and the locations are Clear Creek (CCR), Balls Ferry (BSF), and RBDD (RDB).

Thanks
