**Subject:** Re: (v2) SWIFT RESPONSE REQUESTED: Peer Review Focus

For Delta --

- What are the panel's views on the sensitivity of the salvage data period on salvage-density model results? Is there a "best" data period that (for future consultations; not time to adjust for the current consultation) should be used to compare two different operational scenarios?
- What are the panel's views on the clarity of description/scientific support for NMFS's Delta conceptual model (top of the Delta effects section)?

Hi All,

A follow up from Cathy's email yesterday and today's meeting with the peer-review panel where the panel reiterated the question:

Is there explicit guidance wrt just what models/approaches/analyses were that are of greatest interest to secure peer review?

Basically are there any hot topics that we would really like/need peer-review on?

Sarah identified the following on Clear Creek:

- "Are there significant risks or benefits that have been overlooked?", and
- "Are proposed flows and temperatures appropriate for the species?"

For Shasta I think a key issue is (Related to Panel Charge question #5):

5. Does the draft biological opinion adequately address data gaps and uncertainties? Specifically:

A. Are uncertainties and assumptions in the effects analysis clearly stated and reasonable based on current scientific knowledge?

- As it relates to Section 2.5.2.1 (specifically 2.5.2.1.2 Project Uncertainties)

Do any of the Division leads have other key topics that we would really like/need peer-review on?

Evan
