**Subject:** IOS clarification (ROCON LTO)

Hi Steve,

I have a question regarding the initial seed population used in the IOS model and the assessment of proposed operations of CVP. What was the initial seed population (total number and number of females)?

At one point I thought it was 5,000 with 3,087.5 females, but I have since been told that the seed population was 3,000?

Any help clarifying would be appreciated.

Thanks,  
Evan Sawyer
