Subject: Re: ROC LTO - Shasta temp management

It's hard to assess effects with sentences like this: "In any given year, cold water pool and storage could result in Reclamation switching between tiers within the year if needed to optimally use the cold water pool."

Doing my utmost to keep this response professional:

That is the way it's written in the BA/PA. It's what Reclamation is proposing and I don't know that we've agreed to anything. Throughout the PA there are sentences or clauses like that that add to the uncertainty of operation.

"Temperature management would conclude October 31, or when the monitoring working group determines based on real-time monitoring that 95 percent of winter-run Chinook salmon alevin have emerged, whichever is earlier."

Is this 95% emergence point something we have agreed to?; is it a new proposed operation?
