Subject: Re: Shasta Prep

Now that I think about it, it's also a comment on analysis and we are trying to stay away from those today. PA clarifications only!

It is tough to not get worked up over these.

Yeah I feel Reclamation purposefully 'misunderstood' that. They're saying a flow change from September to December is not rapid. I agree that's not what's in the BiOp. I analyze a flow change from the average October/November flow to a flow in December (that is based on September storage).

I tried reading through comments last night but it was really hard to not get upset.

One thing to maybe be ready to jump in on (if we get that far):

Rec's comment in the winter minimum flows section regarding ramping rates, and why 2750 reduction over 4 months is "rapid".
