Subject: ROC LTO: tier 1 frequency

Hola amigos (reading a lot of Dora books with Everett lately). Can one of you confirm or let me know the correct range below that Maria (MCR) commented on? It is the frequency of exposure for tier 1 from the I&S summary table.

Medium (45 - [\[MCR1\]](#) 68% of years)

[\[MCR1\]](#) Are we still using 45 % in the effects section? Be careful to track effects section because 45% is historical and they are saying they can make significant improvement
