Subject: I&S Tables

I took a quick look at the CWF BO and as far as I can tell the stressor (I&S tables) are only included in I&S section. In the CWF BO stressor tables seem to be comprehensive meaning that there are NA and low magnitude stressors included. It may be easier to revert back to this approach so we avoid redundancy and multiple stressor table formats (in effects sections), streamline 508 compliance, etc. We can add all the uncertain or NA stressors to the bottom of the I&S tables (now arranged from high to low magnitude stressors) so as not to distract the reader. Let me know what you think.

Thanks

Joe
