**Subject:** Finally...

This figure shows the general flow of info from the different models. It is not updated yet from CWF but I think can be easily talked through even without revisions. Any particular model can get into more specifics in discussion at the meeting (for instance, that the DPM uses DSM2 results more directly than it uses CalSim results) but I don't think that we need to have that reflected in any materials prepared for Thursday. We can talk to it and if there is a question we can ask Rec or their contractors who provided the work.

Expected to be added:

Floodplain inundation

WUA analysis

Anderson egg mortality model

Salvage-density analysis

Perry and Pope

Reclamation Egg Mortality Model (will be renamed SacSalMort)

Expected to be removed:

USGS Flow-survival model

OBAN

DSM2-PTM

DSM2-QUAL
