Subject: Re: AR stressor tables

The deconstructed action diagram is definitely overly complicated but i do think we have to address these categories in some manner:

Seasonal Operations	Site-specific	Core
2017 Flow Management Standard Releases and “Planning Minimum”	Site-specific	Core
Spawning and Rearing Habitat Restoration*	Programmatic	AM
Drought Temperature Facility Improvements*	Programmatic	AM

Likely an oversimplification on my part, but I thought the deconstructed action was unnecessarily complex with seasonal operations that crossed life stages. I could take on fixing that later this week.

Brian and Joe, I am wondering why the action components are not listed in the American River stressor tables. How much work would it take to include them?
