Subject: Re: ROCON American River Effects

Thanks Brittany for working on the American effects section. Please coordinate with Stephen on updating the water temperature analysis. He's putting together a couple of tables for over summer rearing that we'll want to incorporate, and likely will be able to help with other temp data updates.

Stephen, for the tables, instead of looking at the entire May through October compliance period, please modify the analysis so the table just focus on July through September. I think that will be a better indicator of potential effects to steelhead, and I'm more interested in showing potential effects than compliance. Feel free to call me if you want to talk that over.

Thanks,
Brian

It's been too long since I reviewed. I'd have to take a look. If we have the data we should be able to make our own.

I'm still working on addressing comments the American River effects section. The biggest gap in it and the majority of comments left to address have to do with the figures needing to be updated. Did we ever get or make updated figures for the American Effects Section?
