Subject: Re: Question for Eric on WR LCM based on Delta section comments

I wouldn't worry about making responses to all comments -- we aren't for Shasta and I don't think need to for Delta! I think that we can talk through this in person. Bottomline is that the ePTM was not updated in a way to have stakeholders happy, so rather than use a version that people critiqued (used in CWF) they went back to the older version. I think I can talk through that.

Cathy -- Wondering if Eric could suggest a response to the following comment related to use of the Newman equations in the WR LCM. Comment, excerpted below, is from p. 20 of the attached Reclamation comments on the Delta section:

Comment: "This is an outdated, correlative approach that conflicts with recommendations of the SST, IRPs and with the current work of the NMFS SWFSC. Let's discuss."
