

There was considerable evidence presented at the hearing as to what are proper water quality objectives. The Department of Fish and Game has requested a minimum DO of 7 ppm to protect the salmon fishery (RT 526). The Board's Interim Water Quality Control Plan, San Joaquin Basin 5C, specifies that as a result of waste discharges the DO in the Stanislaus River should not fall below 85 percent of the saturation value, which is more restrictive than the DO standard of 5 ppm agreed upon by the Bureau.
