Subject: Re: PLEASE RESPOND -- WUA AND FLOODPLAIN ANALYSIS

Is this the same case for Clear Creek since they just redid analysis and sent it on the 18th? Yes using this especially for critical years between COS and PA since flows may be less.

Follow-up answer: Yes, exceedance plots.

I did see that they provided WUA units. Could they provide it as percent of maximum WUA? That would tell me more about the PA scenario than the units, which just inform the relative comparison between alternatives. I thought we asked for max WUA initially?

One followup...if the answer to my question is Yes, let me know if you used/planned to use the exceedance plots.

Thanks.

PS I have some stress balls in my office, you can throw them really hard at the wall and it doesn't hurt anyone. A friend told me....not that I've done it myself...

All --

I just got word that the WUA and floodplain inundation results were grouped incorrectly wrt water year types.

PLEASE LET ME KNOW ASAP IF YOU USED THESE SO FAR, OR IF YOU PLANNED TO.

I have some updated results.

I understand that this is frustrating.

For now, just let me know if you used either of these so far in your analysis or if you planned to before finishing on Thursday.

Stay strong, friends!

Cathy
