Attachments: Current Central Valley spring-run White paper highlighting natural occurrence in Tuolumne and Stanislaus UPDATED.docx; Assignment_Report_CFS130626.doc

Hi Kristin,

We often have spring running adults, and also see juveniles of the appropriate size at our rotary screw traps on the Stanislaus River. We also have at least one confirmed genetic spring-run outmigrant, though we have not tested very many. I don't know of any observed spawning or redd documentation, though I don't believe anyone is actively looking for fresh redds in August and September.

I've attached a report Sierra Franks put together when she was with NMFS in Sacramento discussing spring-run Chinook in the San Joaquin Basin, and report documenting the genetic analysis done on size outlier Chinook captured at the rotary screw trap.

I'm happy to chat on the subject if you have more questions.

Hello JD,

I got your contact info from Monica Gutierrez (Sacramento NMFS office). I am wondering if you have any spring-run data in the Stanislaus. I have some Canon and Kennedy snorkel survey data that show steelhead spawn and rear there, and that some adult spring-run Chinook have been observed, but there is no known spring-run spawning. Can you confirm if this is true?

Thanks,
Kristin
