

Life Stage/ Habitat Type	Diversity Group(s): Population (s)	Stressor	Type of incidental take	Amount or Extent of Take: Short term	Amount or Extent of Take: Long term
Juveniles/ smolts	SSN: Stanislaus River	Monitoring	Non-lethal: Handling stress Lethal: Mortality	Non-lethal take of 60-80 juveniles per year, including smolts, from Rotary Screw Traps at Caswell and Oakdale, based on past years' encounter rates (and under current population levels) and longer sampling season of December through June. Incidental mortalities are exempt this monitoring.	Incidental take is expected to increase as the population increases.
Adults	SSN: Stanislaus River	Monitoring	Non-lethal: Harassment, handling stress, delayed migration Lethal: Mortality	Non-lethal take of 10-25 adults per year from the counting weir on the lower Stanislaus River, based on past years' encounter rates (and under current population levels) and a longer sampling season of September through March. Incidental mortalities are expected to be no more than 2 adults per year.	Incidental take is expected to increase as the population increases.
