Subject: GS - recovery criteria?

Hi Page (and Joe),

Thanks again for the GS additions to the EnvB section!

I have one more request for that section.

The attached is the "recovery criteria" section within the EnvB.

Please take a look at what I included for the salmonid species, and add short paragraph for GS.

This is to establish what is needed for recovery, and where we are at currently.

For salmonids this works well to point out which populations within the action area are affected by the proposed action, which is a helpful part of the story for when you get to the integration and synthesis section for your conclusion.

Let me know if you want to talk about a similar (or different) approach for GS.

thanks,

Naseem O. Alston
