Subject: Take tables

Hi all,

Please take a look at Jeff's entries in the tables (Delta sections) - the amount/extent column needs to include: "Ecological surrogate is... " - many will be habitat area (define an actual habitat area/amount), or they could be temperatures, etc - what is the metric we would be gauging whether it is exceeded?

I added a few comments in the table so far, but closed it for now if some of you can jump in and add the surrogate language.

Jeff - can I add your sections soon - even if the salvage section is still underway?
