

Dave - - Can you please drop the 5 days and 24 hours language from the section on temperature exceedences? The five days is causing heartache. I think the section can be more general and read like this:

“Consistent with the Shasta Cold Water Management Plan, Reclamation shall operate the Temperature Control Device at Shasta Dam to manage water temperatures below Keswick Dam and monitor the results. If monitored water temperatures exceed the tolerances in the Shasta Cold Water Management Plan, Reclamation shall inform NMFS and explain the deviation at the next SRTTG meeting. “

Thanks,

Maria
