Subject: Re: Possible uses of SIT model for ROConLTO?

Hi Barb,

My sense is that there is not an opportunity to use the SIT model for the CVP/SWP BO. Do we have funding? Even if we do, I'm not sure we want to hold up the CVPIA Fish Program, which I suspect it would do.

Also, the SIT models are not intended to evaluate water operation scenarios, and I assume their design limits their ability to do that.

Apologies for the negative response.

Rachel, do you have anything more open minded than my read on this question?

Brian

Brian & Rachel -- Do either of you see any opportunities to use the SIT model to evaluate, e.g., proposed action vs. current ops scenarios in the ROConLTO effort? Either CV wide or in watershed-focused applications?

If you see some potential opportunities, do you think those opportunities could be realized by early March, at the latest, for incorporation into our effects analyses?

Barb
