Subject: climate change in EnvB

Hi Cathy,

I thought I would check with you to see if you have any ideas for a reference or have someone that can find one (Rosalie pointed out needing one for the following statement that I believe Brian got from CWF):

Water management is just one of a few landscape-scale factors that have shaped the Central Valley environment - gold mining, dams, and levees also have played an important role. More recently, climate change has emerged as perhaps the most important factor affecting the Central Valley landscape environment. [\[NA1\]](#)
