Tariq,
Thanks for the quick response. Here's the spreadsheet I forgot to attach.

Would Wednesday at 9am work for you?

Brian

Brian-

I can provide you with the Delta inflows under natural conditions as simulated in our models. I did not find an attached spreadsheet. Regarding data related to Figure 1-1 in your e-mail I can provide you with partial data from our modeling efforts. However, another good source are the staff who work on the California Water Plan. For clarifications can we schedule a conference call next week? I'm available most days except next Friday.

Thanks,

Tariq

Subject: Historical Figure of Delta exports relative to natural inflows

Tariq,

As you can see below, Derek Hilts suggested I contact you for some data that I'm trying to find. I'm looking for a figure or data so I can show total annual Delta exports divided by total annual natural Delta inflow over time. I think that would be a reasonable way to show the percentage of water exported from the Delta, relative to what came in, but I welcome advice on this.

The attached spreadsheet shows what I'm trying to do. I'm looking for the data to fill in column R.

Additionally, do you know of data like shown below for CA's water distribution, that is specific to the Central Valley? I'm interested in seeing a pie chart that breaks out Central Valley water by urban, ag, and environmental uses.

Figure 1-1 California Water: How It Was Used and Where It Came From, 2011–2015

Water Year	2011	2012	2013	2014	2015
% Average Rainfall	134%	75%	77%	56%	77%
Precipitation in millions of acre feet (MAF)	248.1	138.9	142.0	102.6	143.3
Applied Water - how water was used ...					
	millions of acre feet				
Urban	7.7	8.3	8.3	8.1	7.0
Large Landscape	0.6	0.8	0.7	0.8	0.7
Commercial	1.1	1.1	1.2	1.1	1.0
Industrial	0.4	0.4	0.4	0.3	0.3
Energy Production	0.1	0.1	0.1	0.1	0.1
Residential - Interior	2.4	2.7	2.7	2.9	2.4
Residential - Exterior	2.3	2.4	2.5	2.4	1.9
Conveyance Applied Water	0.4	0.4	0.4	0.4	0.3
Groundwater Recharge Applied Water	0.5	0.5	0.2	0.1	0.2
Irrigated Agriculture	31.7	35.0	35.7	35.0	32.4
Applied Water - Crop Production	26.9	31.6	32.6	32.5	30.5
Conveyance Applied Water	3.4	3.0	2.9	2.3	1.8
Groundwater Recharge Applied Water	1.4	0.3	0.2	0.2	0.1
Environmental Water	53.2	33.9	29.8	21.7	24.7

Thanks,
Brian

No problem at all. Thanks for the DWR contact.

Hi Brian,
 I don't have the natural flow estimates, but I would think DWR would. I suggest you contact Tariq Kadir at DWR (kadir@water.ca.gov) for any numbers referenced in the report. Sorry I can't be of more help.

After reading the DWR report you sent, it seems that total Delta exports divided by total natural Delta inflow would better represent the percentage taken out. I didn't see

a companion table for natural inflow like Appendix B's Table B-28, although there are some data on natural Delta inflows. Any advice on a next step?

Hey Brian,
I don't know if you intentionally said "unimpaired Delta inflow", but I will assume you did. See Appendix B's Table B-28 of the attached report.

Unimpaired flow estimates have a gigantic number of caveats that come with them. The attached report has a ton of information that might be of interest to you.

Hi Derek,
Some day this project will push you out the door, but I'm really glad it hasn't happened yet. Thanks for the export data!

Any chance you would have data or a figure on the percentage of CVP/SWP Delta exports relative to total unimpaired Delta inflow over that same or a similar historic time period? As in what's the percent taken out each year.

Thanks,
Brian

Cathy,
I have this chart, but it only goes through Dec 2017. I can update it for 2018 numbers on Monday if you want.
Derek
