Subject: Most recent estimates of salmon mortality/survival through the Delta

Jeff,
Can you point me to recent literature I could use to complete the paragraph below? It doesn't have to be specific to winter-run.

Operating the CVP/SWP and the resultant conditions that are created reduce survival of juvenile salmonids outmigrating through the Delta. Prior to the protections established by the 2009 biological opinion, mortality of winter-run juveniles entering the interior of the Delta (through DCC or Georgiana Slough), was estimated to be approximately 66%, with a range of 35-90% mortality(NMFS 2009^[BE1]). More recently, juvenile salmon mortality through the Delta has been estimated at...X%
