Can you summarize by email the content? My questions are:

Is the objective of the model clearly laid out to support the feb forecast deceiving making? Is it clear what inputs and outputs are? Will it produce uncertainty estimates, and joint probabilities of risk?

Do they meet our needs? What kind of scenarios will we be able to run with it? Is it clear it's on a platform that we can independently run? How does it fit with what Eric is doing?

More detail would be helpful.

Maria,

Brycen and I took a look at the work plan and are OK with it. Have you had a chance to review? Eric Danner should be here (BDSC) so I'm going to try to track him down and see if he had a chance to review, and his thoughts.

Maria, Garwin,

I wanted to check in to see if you've had a chance to review the draft workplan in greater detail since we last talked on Thursday. We're hoping to speak about this with some of our CVP stakeholders this week, so we wanted to see if you had any initial thoughts, reactions, concerns, or wanted to discuss the document/plan in more detail.

Thanks,
Jeff
