 - Development of annual plan
 - 56° F DAT at compliance location between Balls Ferry and Bend Bridge May 15 – Oct 31

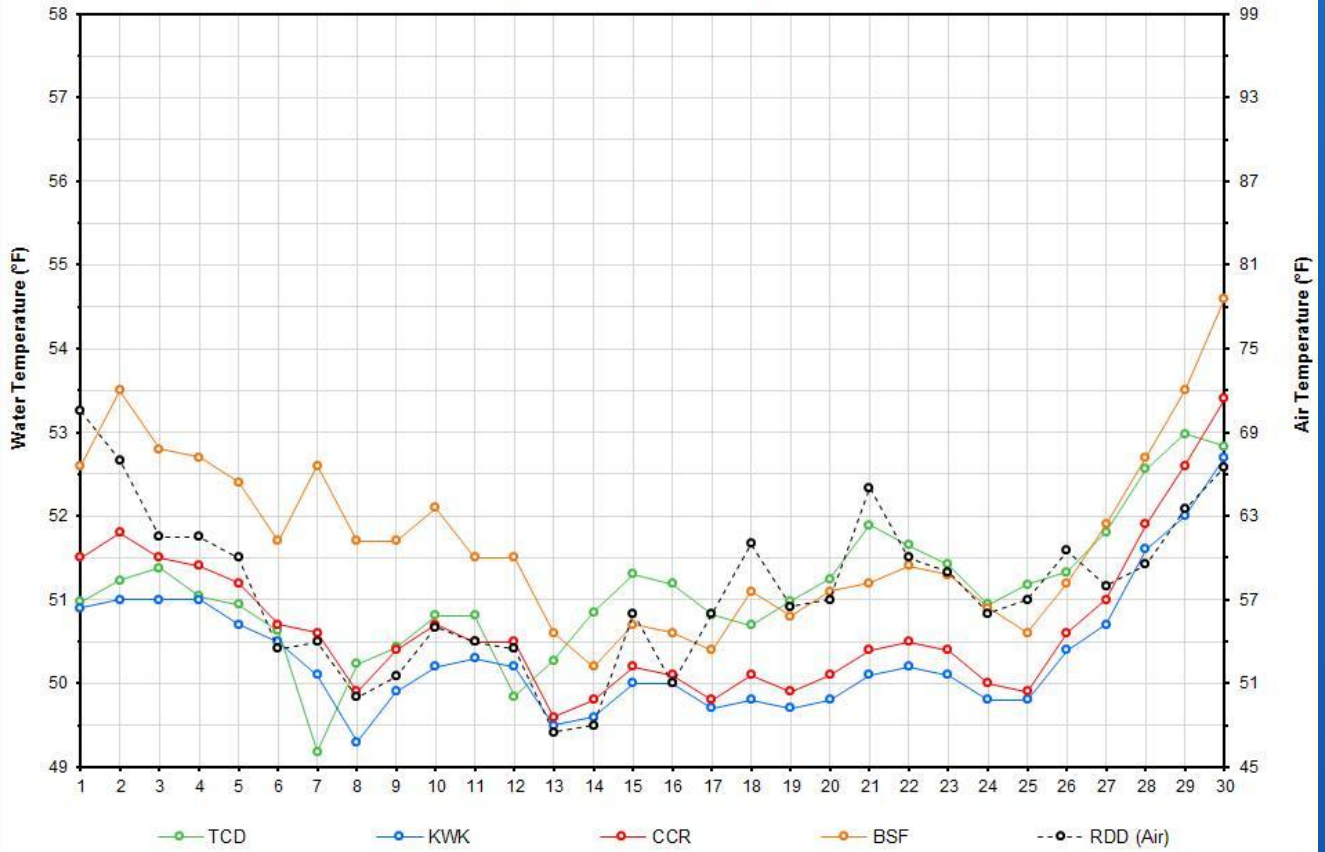

RECLAMATION

2017 Plan

- **Compliance**
 - 56° F DAT; Balls Ferry
 - May 15 – Oct 31
- **Target (Operational Study)**
 - 53° F DAT as surrogate to 55° F 7DADM
 - CCR Gage as surrogate to most downstream redd
 - Subject to further discussion and analysis if most downstream redd ends up significantly farther downstream
 - May 15/onset of spawning through emergence
 - Subject to further discussion and analysis if late emergence has potential to cause impacts to future cold water pool and/or significant fall run dewatering risk
 - Offramp if significant impacts

Storage and Flow Targets/Restrictions

- **Spring/Fall Storage Targets**
 - Vary by water year type
 - Spring storage: ranges between 3.5 to 4.2 MAF
 - Fall storage: ranges between 1.9 to 3.2 MAF
- **Spring Flow Restrictions**
 - Vary by water year type
 - April flow: ranges between 4,000 to 8,000 cfs
 - May flow: ranges between 7,500 to 12,000 cfs

RECLAMATION

Analyses – Storage and Flow Targets/Restrictions

- **CalSim analysis**
 - Feasibility of targets/restrictions
 - Impacts/changes to other parts of the CVP/SWP system required to meet targets/restrictions

RECLAMATION

Analyses – Storage and Flow Targets/Restrictions

- Initial CalSim sensitivity analysis
 - Two scenarios – both use ELT Climate Change (Q5):
 - “Current Ops”
 - “NMFS Amendment”

RECLAMATION

Analyses – Two Scenarios

- **“Current Ops”**
 - Attempts to replicate some reduced deliveries to help protect storage
 - Does not implement reductions to D-1641 requirements in extreme drought conditions (potential refinement for ongoing studies)
- **“NMFS Amendment”**
 - No specific logic that guarantees Shasta storage levels
 - Allows for any shortage allocation necessary in attempt to meet proposed operational objectives
 - Not a policy or necessarily realistic strategy, but used to test ability to reach targets under essentially any supply condition
 - Shasta-Folsom balance adjusted to target “Current Ops” range of conditions

RECLAMATION

Analyses – Fall Storage Targets

- **Draft Proposed September Storage Targets**
 - Critically dry: 1.9 MAF
 - Dry: 2.2 MAF
 - Below Normal: 2.8 MAF
 - Above Normal: 3.2 MAF
 - Wet: 3.2 MAF

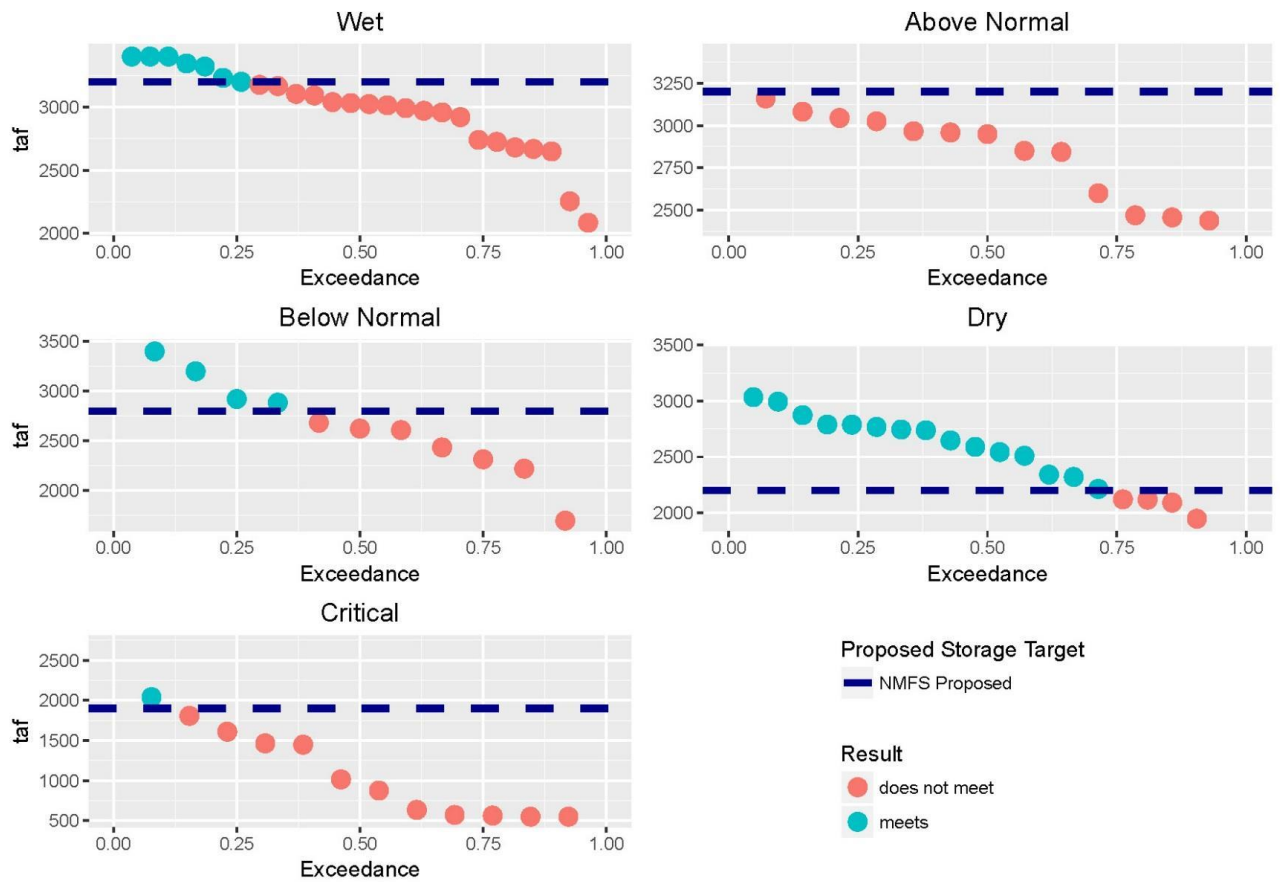

RECLAMATION

Analyses – Fall Storage Targets

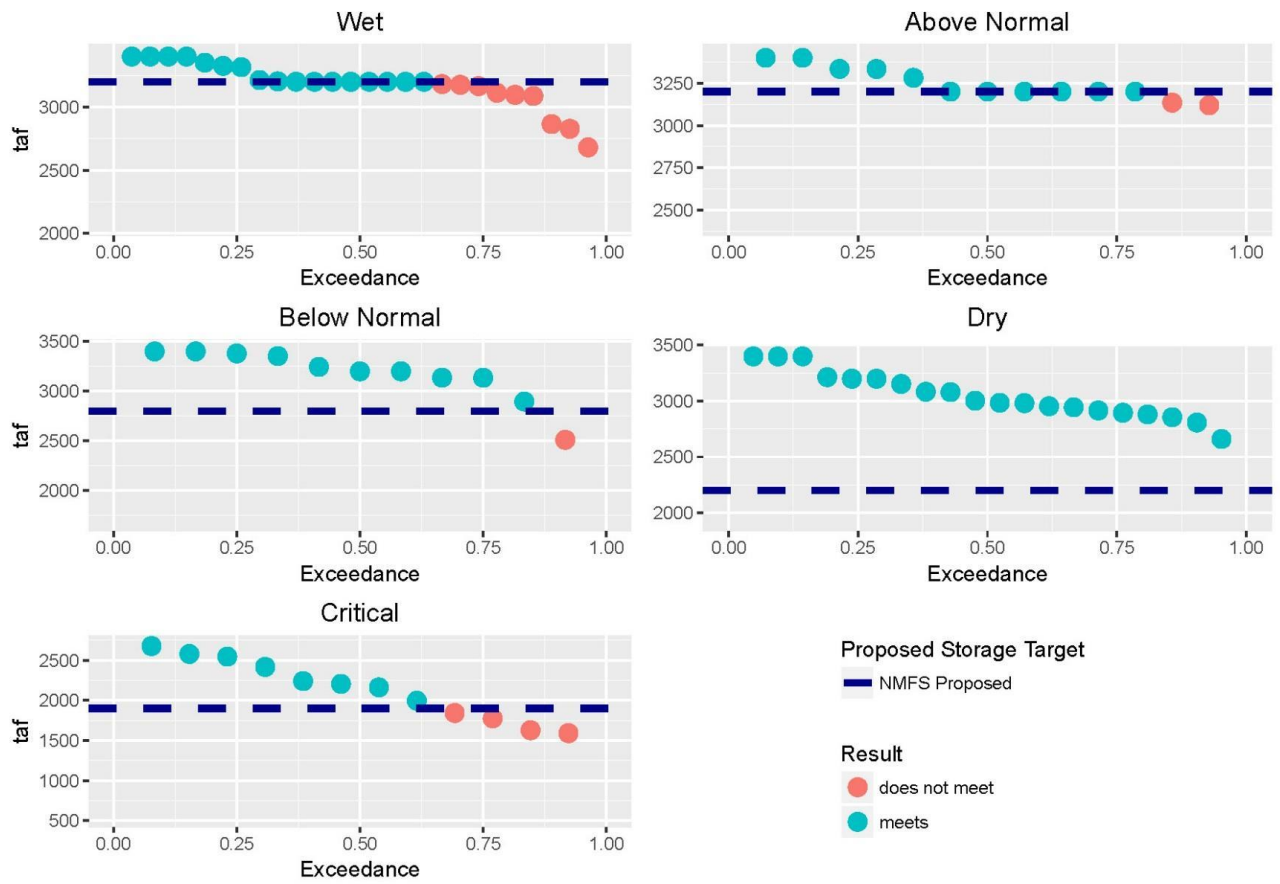

- **Compliance under “Current Ops”**
- **Compliance with modified CVP delivery allocation**
 - Allocations consider fall storage target in computing CVP delivery capability
