Subject: Re: [EXTERNAL] Re: Green sturgeon I&S

Thanks Susan. My intent is to make my corrections on my version and then when it is an appropriate time go in and make my corrections in track changes on the most recent "final" version so that we all don't have multiple versions flying around. Correct my goofs once and be done with it! I'll wait until you give me a green light to go in and make the corrections before it goes out for review if that's all right with you. The corrections don't change the analysis, just makes sure that I am using the correct terminology for the salvage density assessment.

Jeff, please make those terminology corrections in the most recent version on the shared drive that I have been working on.

See the email I JUST sent you with the file name.

Thank you Joe, will get moving on it. Cleaning up some goofs on my delta section with "poor" terminology. Doesn't change assessment, just have to call things by the right term.

Finished a draft of the GS I&S. It is saved as '2.8 Integration and Synthesis V1 srb jch' in R:\Draft BiOp\2_ESA\2.8-2.9 Integration and Synthesis and Conclusion

I discuss recovery in: 2.8.7.2 Assess the Risk to ESU/DPS

If this recovery discussion seems reasonable, I will do the same for steelhead.

I had to format the stressor critical habitat tables with small font so they fit on the page and I could add comments/track changes. Still haven't included discussion of the ~8 Delta Division effects I wrote up but we're making progress on retrieving that document and hopefully it can be added later. Otherwise, have some suggested changes on Evan's effect conclusions for presumably beneficial actions like fish screens. If those changes make sense Evan may need to change his effects section slightly to reflect that.

I'm planning to stop working on GS I&S and move onto steelhead. Hopefully Jeff has time to review and revise GS I&S as needed.

Thanks,

Joe
