Subject: Re: ROC on LTO Clear Creek effects analysis

Sarah,

Attached are my track changes for both Clear Creek and the channel maintenance pulse flow section. Looks like you worked through my comments up to page 18, so that's where I stopped my review.

Let's chat about the following tomorrow, maybe right when you get in, and before my meeting marathon:

- Revision process
- Reply to comments
- Tables and figures
- Others

I'm not finished, sorry, I hoped to work on it from home last night to finish-but wasn't able to. I'm going to keep working on it til I hear from Cathy. I think you could at least address the edits I have so far if you had time to work on it today. Sorry I didn't update yesterday- I shut my computer down right before you emailed.

Sarah,

See attached for my track changes (also saved in the CVP ROCON drive. I tried to move the earlier version into the Archive folder but can't) seem to. Please take a look at the critical habitat section first, and maybe the end of the effects to the species. There are a bunch of placeholder bullets, thoughts, etc., that need to be completed.

Let me/us know if you need help with any aspect of the analysis/my comments, and we'll see what we can do.

I added "Clear Creek" to the file name, and think that we should do that, in general. I know that Clear Creek is part of the Trinity River Division, but Reclamation said they are not consulting on the Trinity, so it's a bit confusing when we're looking for Clear Creek documents within our own files.

ASAP is the name of the game, as to the extent that the revisions may influence the I&S sections, they need to be addressed ASAP.

Thanks.
