**Subject:** Re: Update on SRKW reviews

Thank you Jeff

I have a revised updated version of the SRKW effects analysis that addresses most all comments (have not added recommended graph labels yet) and relevant additions/changes from the updated productivity analysis from Hannon. I'm going to clean it up and send to Penny/Chris for their input now. Barring any additional changes/input, I assume it's otherwise entering the review process early next week?

Dan

Morning Dan,

I reviewed your section and it is on the share drive at: R:\Draft BiOp\2\_ESA\2.5-2.6 Effects of the Action\Effects on SRKW\SRKW effects analysis V2. Please take a look.

Cheers,

Jeff

Dan,

Jeff will be reviewing the SRKW analysis...eventually. Stay tuned.

Thank you for the heads-up. I'll be standing by to hear from someone, although I will probably go back in and at least work through comments you had in the interim. I did plop the ITS language that I have drafted in the ITS document on the ROC drive, but it's generally awaiting some discussion of exactly how we can/should measure the extent of Chinook take as a proxy for SRKW take.

Dan -- FYI, the SRKW Effects and I&S sections have been reassigned so I can focus on responding to edits on my Stanislaus/San Joaquin River effects section (and you don't just getting bumped down my list). Not sure what the current ETA is for further feedback on those sections.

I have flagged to Garwin that the reviewer should keep an eye out for potential "legacy language" related to elements of the '09 project description from the in-progress I&S sections you had available.

I have also mentioned that, eventually, we will need to update both John's and your docs to reflect the assumed restoration acreage (and associated Chinook production) once we have a final determination on acreage in the PA. My tentative understanding is that both the Sacramento and American River acreages are in the baseline, and that just 10-15 acres is assumed reasonably certain to occur in the PA for the Stanislaus, which (assuming 56 adults/acre)=560-840 Chinook.

Cheers,  
Barb
