Subject: CC and Spring Creek Debris Dam

Naseem is probably beyond busy with the SR I&S section, so this will be for next week, but I told her last night that CC is good enough to send out, but I think there should be more in the analysis for Spring Creek Debris Dam. Seemed like I reviewed it so long ago. It's better, but the ending seemed to leave me hanging regarding the amount, extent, and type of potential adverse effects. Something to think about for now, but not to act on immediately.

How comfortable are you with tackling any comments in any I&S section?

I think I am caught up on everything for Clear Creek effects (references, I&S) and pending any edits from Maria or after today's meeting.

Do you have any things that I can work on for ROC today?

I am organizing files, was going to look back on my Admin record and update for now.
