Subject: Re: Draft ITS (Shasta temperature)

Hi Cathy, Garwin and Naseem,

Attached is a revised version of the approach to identify take related to Shasta temperature operations.

Just to clarify my intent: I was trying to describe “authorized take” as the effect of operations where the following are indicators of that effect:

- Tier frequency would occur at a rate identified,
 - Average temperature exceedances/TDM would be as identified,
 - Operations would not deviate from the annual TMP,
- AND/OR
- Operations are deemed consistent with the performance metrics outlined in... (this was my attempt at accommodating an alternative to reinitiation).

Evan

Some revisions on top of Garwin's. Some of these are to update based on the PA revisions that just happened today.

These are temperature-related. Are additional types in the works (flow-related?)?

Hi All,

Attached is my draft of the ITS for Shasta temperatures. If you could, please take a look and critique as necessary.

Thanks,
Evan
