Subject: Re: East Side Division ITS

The tables are completed, however, I need to edit them (and associated text) since I had associated take with temperatures at several locations, but there is only temperature gauge data at one of the locations. So instead, I will either change the SJR locations further downstream (where there are temperature gauge stations) OR state that take is exceeded if they exceed the average monthly temperatures in the modeling. We could allow exceedances for certain percentages of time so it doesn't instantly trigger reinitiation. I'm hoping to touch base with Barb again today to get her input on what would be best.

I believe Barb and Joe were working on Monitoring T&Cs and Jeff for Delta, but I'm not sure who else.

Thanks. The incidental take table for the East Side Division is done, and you're talking about text associated with it, right?

How about T&Cs? Anyone working on those for the East Side Division?

Good Morning Garwin,

Today I will be working from 7:30 am to 1:30 pm on reviewing the high speed rail BiOp and editing take language for Stanislaus/SJR effects.
