From what I heard, the I:E ratio has a water cost of ~300 TAF, which is absorbed through the 800 TAF b(2) account. So, where's the foregone water supply loss?

Subject: CANCEL b2IT today

Unless somebody has specific b2 business to discuss, today's call is cancelled. Please respond to this email if you have pertinent business to discuss, and I will open up the conference line at 930.

April CVO forecasts attached

Preliminary WY 19 daily accounting shows roughly 230 TAF in fish actions Oct-Mar. The 4:1 is currently consuming a lot of b2 water and will continue through May.

Next monthly call is Thurs May 23 at 930.
