Subject: Re: ROC LTO - export comparison figures

Thanks Jeff. Seems important to highlight that macro context somewhere along with drilling down to estimated fish loss. I like having it in the I&S so readers don't have to remember what was in the Env Baseline, if they'll even read it.

I think that makes sense Brian. I didn't check to see if the figures were included in the modeling section, just reviewed the narrative from Evan.

Are these export figures in the biop somewhere? I didn't see them in the Delta effects section Tables and Figures file or the LCM write-up.

If not, I'd like to work them into the I&S by pulling together (integrating) what the PPIC and others say in the EB section about exports already being too high and relating that to how the PA will increase exports.
